Part Spec Audit 3/10/15 BB1

Heil

Part number RM10GE-19660

One big finding from this audit was that the master tag had no YTE information on it. Has an HS80 coil this should always been in this system. I looked through the receiver and purchasing's set of mill certs and could not find that the test reports had ever been sent in. I was able to contact purchasing (Sarah) and she got the information from the mill.

Follow up- Kendel reviewed all current master inventory for YTE information. 29 of 109 coils requiring the information did not have it. A corrective action (Case 9121) was created and purchasing is looking into root cause, etc.

Work order listed material as Surface Critical. Material had heavy rust from sitting in warehouse since December. Material is hot roll black from Nucor Berkeley. As we would not be able to claim material back to the mill, I took pictures for sales and told operations to continue running. Coil eventually improved and sales approved sending all material to Heil.
